1.INTRODUCTION:- Research is a process to discover new knowledge. A systematic investigation designed to develop or contribute to generalizable knowledge. It summarise in a single sentence what you hope to achieve at the end.

2.CONCEPT OF RESEARCH:- **Research** is an art of scientific investigation . research covers the search for and retrieval of information for a specific purpose .It is search for knowledge with the help of objective and systematic method of finding solution to a problem..

3.DEFINITION OF RESEARCH :- According to P.M.Cook, “ Research is an honest ,exhaustive, intelligent searching for facts and their meaning for implications with reference to given problem. It is the process of arriving at dependable solutions to problems through the planned and systematic collection analysis and interpretation of data. The best search is that which is reliable , verifiable and exhaustive so that is provide information in which we have confidence”

Research is required because of the following reasons :

(i) To identify and find solutions to the problem.

(ii) To help making decisions.

(iii) To develop new concepts

(iv) To find alternative strategies.

4. CHARACTERISTICS OF RESEARCH:-

The characteristics of research are as follows-

- (i) Systematic approach
- (ii) Objectivity
- (iii) Relevancy

The above following characteristics are as explain shortly below-

(i) Systematic Approach:- Each step must on your investigation be so planned that it lead to the next step.

(ii) Objectivity:- It implies that true research should attempt to find an unbiased answer to the decision making problem .Its means true research have a pre-planned objective.

(iii) Relevance:- A research should be relevant according to objective and according to information required for that.

5.OBJECTIVES OF RESEARCH :- All researchers aim at finding answer to questions by applying certain scientific procedures. The following are the objectives of research given below-

- (i) To investigation a subject
- (ii) To collect the data regarding a problem
- (iii) To conduct logical and objective study
- (iv) To conduct a systematic recording , reporting and presenting the facts .

The above objectives of research are shortly explain below---

(i)To investigates a subjects: Research is undertakers in a specific field of knowledge. It may be pure science or social science ,etc. An activity undertaker to verify or revise these facts or principles become research.

(ii)To collect the data regarding a problem:-- Research gather new knowledge or data from primary or first hand sources . It is not research where on simply restates what in already known or what has written.

(iii)To conduct logical and objective study:-- Research in logical and objective, applying every possible test to verify the data collected and the procedure employed. The researcher eliminates personal feelings and preference from his research activity.

(iv)To conduct a systematic inquiry of the subject:-- Research in said to be a careful and systematic inquiry .
